Rams 'dump' \$5 million on fan-friendly revenue projects Sep. 30, 2012 Written by Todd McDermand Columnist

BEST BUY: The Rams will launch a fund that will be managed by Creative Artists Agency to guarantee fan satisfaction in every Rams home game at the new stadium. More **ADVERTISEMENT**

The Rams officially broke ground on their new stadium yesterday, but that doesn't mean construction has stopped. The construction company has spent \$5 million this year to renovate hotels and shopping centers on the game day routes and is now going to give the city \$5 million for projects. Those projects would

be “more community-oriented,” spokeswoman Valerie Ramirez said Monday. It’s not much, but it’s a good move — the city of St. Louis was ready to pump up the district to \$14 million for a project that might have taken years to build. “They’ve done some really good things in the past two years,” said Mayor Francis Slay, who supported the \$64 million stadium. “Now, instead of taking private money from investors, they’re going to keep all of the profits from the new stadium.” The Rams have their own money, said Executive Vice President of Business Operations Kevin Demoff, but the construction company has experienced high profit margins in the past. “We’re proud to have those margins,” Demoff said. “This is to enhance those margins

and create a better fan experience.” The government can buy parking lots, Demoff said, but they would still come into play for construction on the stadium. The money for the “fan experience fund” will be returned to the NFL, which is still looking for a project to win the game-day revenue contest in Kansas City — and

Q: How to use global variable in dart

How do you use a global variable in dart? For example: library.dart

```
class Something() { String y = ""; } main.dart
import library.dart as dl; void main() {
dl.Something(); // Something is not defined }
```

How do I define it in main.dart? A: For your example (assuming you want library.dart to be a top-level library and not a nested one), just declare it: import

```
'package:library/something.dart'; void main() {
dl.something(); }
```

You can also add it to pubspec.yaml if you'd like. was weak. I think it's
